To The Department of Energy
in Response to your Letter
for Comments ON Yucca Mtn.

SEP 06 1991

DOE,

I believe that the area of the Yucca Mountain is the only ~~practicable~~ practical site in the nation, for the storage of radioactive waste. It was an area of nuclear testing already, so why store nuclear waste anywhere else. I understand that no one really wants this waste in their area, so it is easy to say NO. The need for nuclear power has always been apparent to me and thus the need to store this waste. A breeder ~~react~~ reactor in the same area could supply an outrageous amount of power, by using some types of this waste. The only concern many in southern Nevada have, is transporting the waste through populated areas. If this one problem could be addressed the fears would be reduced greatly.

I believe the Secretary should develop the site.

429 N. 15th St. #7
Las Vegas, NV. 89101

Sincerely
JAMES SHIELDS
